EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Donald Stephens on 1/21/04.

The application has been amended as follows:

IN THE CLAIMS:

Cancel the non-elected claims 13,15,20 and 22.

2. The following is an examiner's statement of reasons for allowance: The prior art does not teach or suggest a method of making a segmented reticle in a silicon substrate, wherein discharge-machining is performed into one major surface of the substrate towards another major surface to form struts separating respective subfield regions and then dry-etching is performed in regions not occupied by the respective struts towards the same direction as to the discharge-machining.

3. The closest prior art Hashimoto et al (5,401,932) disclose a process of making vertical patterns (43) in a silicon substrate (41) utilizing electro-discharge machining from one major surface towards the another major surface and then wet-etching the substrate from the reverse side of the substrate in order to open the bottom of the pattern 43 and thereby forming a through-hole pattern (46) (see col.7, lines 57-col.8, lines 19 and figures 4a-4e).

Art Unit: 1765

Hashimoto et al fail to teach that the discharge-machining and a dry-etching are performed in a same side of the major surface of the silicon substrate in order to form a reticle substrate, in which the respective struts are extending into the thickness dimension of the silicon substrate from the other major surface.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Katakura (6,428,937) disclose a process of making reticle blank utilizing dry etching but fails to disclose the introduction of discharge-machining along with the dry-etching process.
